

BITCOIN RESEARCH & VENTURES COMPANY

SEATTLE AUSTIN CHEYENNE LAFAYETTE

Satoshi Nakamoto
(Brock Angelle Thibodeaux)
satoshin-alt@gmx.com

A Prospectus for a Bitcoin-, Ethereum-, USDC-, Dogecoin-, Bitcoin Cash-, USDT-, Solana-backed r&d, manufacturing and ventures company, primarily using the BRVC Coin as utility, in the American states of Washington, Wyoming, Louisiana and Texas, with a planned backing of \$2.5B to start. All content included is property of BRVC. Forwardlooking statements not meant as securities of any kind. This company will focus on the following:

- Week of 4 - 10 August 2025
 - New Discussion Paper link
 - <https://btc.satoshillc.pw>
 - 1998 LUSENET posting
 - http://www.greenspun.com/bboard/q-and-a-fetch-msg.tcl?msg_id=0002hu#google_vignette
- Week of 21 - 27 July 2025
 - 28 July
 - Pedigreen (dApp)
 - Small Dog Yoga Workout Mat w/ Accompanying Fitness Tracker
 - 26 July
 - AfD donation
 - Respond to recent email
 - Germany's RWE AG – 2035 Green Hydrogen – \$2.50 - \$4.50 per kilogram to make – needs to fall below \$1/kilogram
 - Germany's RWE AG + 26 other companies – North Sea, 2035 10 gigawatts
 - <https://www.rwe.com/en/research-and-development/hydrogen-projects/aquaventus/>
 - Hydroxidizers (Hydrogen energy from H2O) + Wind = BTC complementary power-generation, for, easily, less than \$1 per kilogram or HPU (hydrogen powered unit)
 - <https://www.bundestag.de/presse/hib/kurzmeldungen-1101742>
 - Construction of hydrogen-based gas-fired power plants by 2030
 - <https://www.cleanenergywire.org/news/germany-mulls-switching-planned-gas-power-plants-hydrogen-later-stage>
 - AWX tie-in, somehow (?)
 - 24 July

 - USBTC Collateral and Redemption Mechanics
 - [USBTC Stablecoin Collateral and redemption mechanics](#)
 - USBTC Governance Mapping
 - [USBTC Stablecoin Governance Mapping: e.g. multisig signers, emerge...](#)
 - USBTC Stability Policy
 - [USBTC Stability Policy](#)
 - USBTC Proof-of-Reserve Tool
 - [USBTC Stablecoin Proof-of-Reserve tool](#)

- USBTC Stablecoin: <https://github.com/brvc-org/stablecoin>
 - **Steps:**
 - Draft a “BRVC Stability Policy” outlining your collateral type, reserve audit frequency, governance model, and compliance strategy.
 - Build or adopt a Proof-of-Reserve tool so users can verify backing in real-time.
 - Define your collateral and redemption mechanics — capped supply, mint & burn formulas, risk buffers.
 - Map out governance: e.g. multisig signers, emergency pause functions, DAO thresholds.
 - Plan AML/KYC and compliance logistics — especially given cross-border implications**
- Stablecoin worth \$1.39 (?)
 - Backed by Satoshi wallets in BRVC BTC Treasury
 - 100M minted as an initial run (?)
 - = 1,798,561,151 coins at \$1.39 value
 - \$BRVC (?)
 - \$BTCC (?)
 - \$BTVC (?)
 - USCC
 - USAC
 - ASIC
 - ROCK
- Wallets value as of 12:28 PST
 - 131,179,840,000
- BTC online solitaire, No Limit Hold'em, Poker
 - Louisiana online gambling legislation, platform
 - Decentralized
 - Sats model (?)
 - dApp (?)
- <https://holder.io/coins/latom/>
- One singular crypto Coin on multiple (possibly big four) blockchains at once (?), not just existing in different forms or names or “wrapped” on other chains
 - Possible (?)
 - While still staying true to decentralized ethos
 - xCoin (?)
- Apply for Linktree verification
 - <https://bolster.formstack.com/forms/verificationbadgeapplicationform>
- <https://www.fluence.network/blog/fluence-vision-2026/>
- Draft of potential contract for K for bio
- 23 July
 - K for bio (?)
 - Contact management agency/publisher for details (?)
 - Contact booking rep (?)
 - Draft up sample contract (?)
 - How to somehow wrap \$Brock token into something, or to keep it for the Satoshi clues/narrative part of the new chain

 - Everything and More: A Compact History of ∞

Mathematical errata for “Everything and More: A Compact History of David Foster Wallace, Atlas/Norton, 2003, 1st hardcover edition.

p. 14: Conflation of inductive reasoning – called the Principle of Induction, with an $(n + 1)$ sh with the later, quite different, more precisely defined Principle of Mathematical Induction. Not actually misleading.

p. 18: “Calculations involving numbers larger than 2.56×10^{92} are called transcomputational problem they’re not even theoretically doable” – should be numbers requiring more than this many bits (said num of size greater than 2 to the power of this large number). Typo, probably.

p. 26: “ $a_n = -1$ for odd n ” – should be ± 1

- Louisiana Endowment for the Humanities grant (2010)
- “francophones in the state, which, after all, began as part of a vast French colony way back in 1699 when explorers Iberville and Bienville claimed it for the Sun King. From 1764 to 1788, however, three thousand or so Acadians who had been expelled from Canada by the British and who decided to settle in the territory, by that time controlled by the Spanish, acquired land in southwestern Louisiana. These “expert planters and levee engineers,” now known as Cajuns, endured and by the late 1960s came to be closely identified with Louisiana French. This phenomenon blurred cultural distinctions of Creoles and American Indian communities still speaking French. “Acadiana” became a geographical designation for about twenty parishes in south Louisiana, and the state legislature adopted a flag for the region.”

jstale2@IllinoisState.edu
- Bitcoin is property, for IRS/tax purposes
- Bitcoin is a security/commodity, for SEC/CFTC purposes

Donating Bitcoin to Universities (Philanthropy):

- Tax Benefits: Donating appreciated Bitcoin directly to a university can offer significant tax benefits. Since the IRS classifies it as property, you may be able to avoid capital gains tax on the appreciated amount and potentially claim a charitable deduction for the fair market value of the Bitcoin. You generally need to itemize deductions to claim the deduction.
- Reporting Requirements: For donations valued at more than \$500, donors must file Form 8283, Noncash Charitable Contributions. If the claimed value exceeds \$5,000, a qualified appraisal is generally required, and the donee organization (the university) will need to sign Form 8283 and provide a copy to the IRS if the asset is sold within three years.
- University Acceptance: Many universities accept Bitcoin donations and often partner with platforms like The Giving Block to facilitate these gifts. Universities typically convert the donated cryptocurrency to cash soon after receiving it.

American Water Exchange (AWX)

A cutting-edge water futures and commodities marketplace leveraging blockchain technology to facilitate water trading and management.

Key Benefits of AWX

Efficient Water Management

AWX empowers local governments to efficiently manage and trade water resources, optimizing costs and securing long-term water supply.

Water Leasing and Securitization

AWX's tokenized system facilitates seamless water leasing and securitization of water rights, enabling stakeholders to access and manage water resources more effectively.

Complementary Energy Production

AWX's water trading system can complement energy production by providing access to water resources, optimizing costs, and enhancing sustainability in the energy sector.

Increased Transparency and Liquidity

AWX's blockchain-based platform offers increased transparency and liquidity in the water trading market, enabling more efficient price discovery and risk management.

Scalable and Adaptable Solution

AWX's innovative technology can be scaled and adapted to meet the evolving water management needs of local governments, energy producers, and other stakeholders.

AWX's Tokenized Water System

Seamless Water Leasing

AWX's tokenized system enables efficient water leasing, allowing for flexible and transparent transactions.

Securitization of Water Rights

The tokenized system facilitates the securitization of water rights, providing a more robust and tradable asset.

Complementary Integration with Energy Production

AWX's water trading capabilities can be seamlessly integrated with energy production, optimizing water usage and costs.

AWX's proprietary tokenized system revolutionizes water management by enabling seamless water leasing, securitization of water rights, and seamless integration with energy production, empowering stakeholders to efficiently and sustainably manage water resources.

About Bitcoin Research & Ventures Company

- **Mission: Advancing Cryptocurrency and Water Sustainability**

Bitcoin Research & Ventures Company is dedicated to driving innovation in the cryptocurrency and water management sectors, with a focus on blockchain development, venture capital investments, and the creation of a decentralized water futures marketplace.

- **Blockchain Expertise and Funding**

The company specializes in blockchain technology, providing research, development, and funding for cryptocurrency and Web3/Web5 startups and projects.

- **American Water Exchange (AWX)**

Developing a decentralized water futures and commodities marketplace, the American Water Exchange (AWX), to facilitate water leasing and management for local governments and states.

- **Water Leasing and Cooling for Miners**

The water leasing program will provide cooling solutions for Bitcoin mining operations, helping miners complement local energy grids and reduce their environmental impact.

- **Diversified Treasury Holdings**

The company maintains a multi-asset backed treasury, including Bitcoin, Ethereum, USDC, Dogecoin, Bitcoin Cash, USDT, and Solana, to support its operations and investments.

2

Water Leasing and Cooling for Bitcoin Miners

Water Leasing Program

Bitcoin Research & Ventures Company's water leasing program provides local governments and states with access to a reliable and decentralized water supply. This program enables the leasing of water resources to support the needs of the growing cryptocurrency and Bitcoin mining industry.

Cooling for Bitcoin Mining Rigs

The water leasing program also supports the cooling requirements of American-made ASICs and nodes used for Bitcoin mining. By providing a sustainable and efficient cooling solution, the company helps Bitcoin miners optimize their operations and reduce energy consumption.

Decentralized Water Commodities Exchange

The American Water Exchange (AWX) platform, developed by Bitcoin Research & Ventures Company, is a decentralized tokenized exchange that keeps track of water commodities, permits, and leases. This platform ensures transparency and streamlines the management of water resources for the benefit of local communities and the cryptocurrency industry.

Complementing Local Energy Grids

The water leasing program and the cooling solutions offered by Bitcoin Research & Ventures Company help Bitcoin miners complement local energy grids. By leveraging water resources for cooling, the company contributes to the overall sustainability and efficiency of the Bitcoin mining ecosystem.

6

American Water Exchange (AWX)

5

"By leveraging its expertise in blockchain development, venture capital, and water futures, the company is uniquely positioned to drive innovation and create sustainable solutions that benefit both the cryptocurrency and water resources industries."

BITCOIN RESEARCH & VENTURES COMPANY

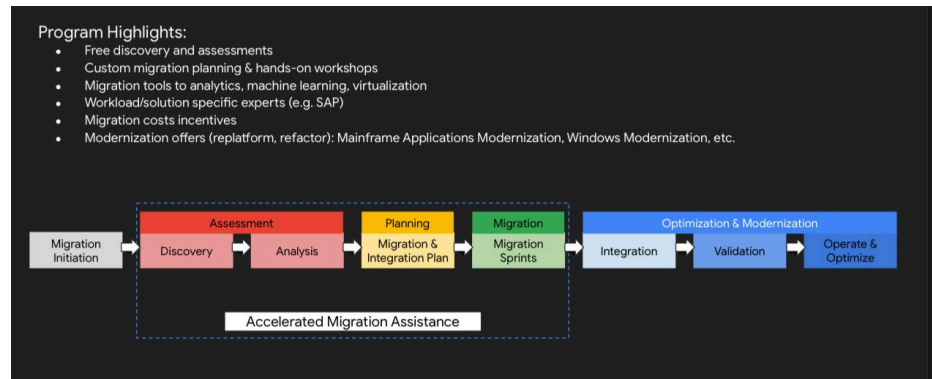

- 24 June
 - American Water Exchange (AWX)
 - Water futures, commodities
 - Proprietary, tokenized system for water leasing
 - Headquartered out of Lafayette Parish, Louisiana (?)
 - Lead with this as part of investing, innovation "package" for Lafayette Parish region (?)
 - Proprietary, all rights reserved: BRVC
 - Lots of leases, permits, working with USGS, USFS, local governments, et cetera
 - Can complement with American ASICs, Node operations for cooling, energy production

- [10] Bitcoin Mining Boosts U.S. Economy with 31000 Jobs, Texas Leads
<https://openexo.com/l/b6831535>
- Bitcoin mining has created over 31,000 jobs in the United States and contributes approximately \$4.1 billion annually to the U.S. GDP, with Texas leading as the top state for mining-related employment and economic impact.
- The industry is revitalizing local economies, especially in rural areas, by investing in infrastructure, supporting community initiatives, and serving as a load-balancing resource for energy grids.
- While Bitcoin mining drives significant economic and job growth, it also raises concerns about energy consumption and sustainability, prompting increased interest in renewable and efficient energy solutions.
- Bitcoin miners, node operators as Manufacturing Job(s)?
- Ohio/Intel as an option for ASIC manufacturing/parts
 - Commercial/Ad(s) ideas:
- SERIOUS POSSIBILITY:
 - THE IDEA OF DOING MATH WITH BITCOIN IS STILL WAY-IN-THE-FUTURE; PLENTY OF FUN POSSIBILITY HERE FOR ANYONE INTERESTED
 - i.e., $x^{\$}$ or something
 - or, xBTC(market)
 - SHA's endless hashing re On-BTC-Blockchain (see for possibly helpful usecase: §1 of Bitcoin Discussion Paper (2025)) virtually ensures it is always going to be a whole other new kind of set or subset of new and untested or proven applied-type science/toolkits for the future in general, just waiting for intellectual-rigor and never knowing X existed or exists on this debatable plane of existence. Bitcoin Core devs still do not get the amount of respect(s) s/he all so rightfully deserve.

 - LEDA now has authority over film production in Louisiana
 - (1) Authority was transferred from statutory law, where decisions must go through the state legislature, to the Louisiana Economic Development Department. This allows for more administrative flexibility and less legislative involvement.
 - (2) The Senate maintained the current cap on the Louisiana Tax Credit Program, currently set at \$125 million.

- The Louisiana Motion Picture Tax Credit Program helps attract movies and TV shows to the state by offering financial incentives. Productions can get up to 40% back on money spent in Louisiana, including costs for local workers. There's also an extra 5% credit for visual effects work done in the state. To qualify, productions need to spend at least \$300,000 in Louisiana. The program has a yearly limit of \$125 million in total credits given out.

This program boosts the local economy by bringing in film projects and creating jobs.

- Louisiana Senate Bill 232
 - <https://legiscan.com/LA/bill/SB232/2025>
 - (d) For applications for state-certified productions or Qualified Entertainment Companies approved by the office and the secretary on or after July 1, 2025, there is hereby authorized a tax credit of up to forty percent for approved projects, in accordance with program rules, and pursuant to the program issuance cap provisions in Subparagraph (J)(1)(d) of this Section.

- Bitcoin Treasury consulting, executive consulting
 -
- More sophisticated understanding of Bitcoin mining and operations if we can obtain a mutually-beneficial relationship with Louisiana lawmakers and legislators
 - MOUs with State, cities, Parishes
 - Additional revenue and tax incentives and subsidies (DOE, et cetera) for Oil and Gas and Energy producers/distributors
- Property Insurance for Bitcoin Mining
 - Energy producers benefit greatly
 - Can mine/node next to Energy rigs, et cetera
 - Can help retrofit and hybrid-ize old Energy rigs, onshore and offshore
- Bitcoin Mining Insurance
 - Bitcoin is highly property-intensive
 - Louisiana laws are very conducive to this
 - Perhaps one can include all property whatsoever in new Trump Made In USA tax regs
 - Business interruption insurance can include breaks in service/mining/node operation(s) during Natural Disasters and due to inclement weather
- File all Satoshi papers (Docs, White Papers) with local Lafayette govt and courthouse, notarize
- If we can show substantial success in this area in the beginning, with considerable capital and customer satisfaction, then the benefits will spill over to other areas (i.e., Cheyenne, Austin, Seattle)
- Bitcoin Utility Risk-Reduction via Bitcoin Mining, Node Operation(s)
 - Louisiana is the energy capital of the world
 - Growing up there helped influence design of Bitcoin and its need more substantial amounts of energy
 - Now that we are in 2025 and Bitcoin is much more improved than its original form, we can start to institute Demand Response Programs with local utilities
 - This conveniently can tie back to the original use-case utility (municipal, Parish-wide) company LUSFiber from Bitcoin's early development days, which offers both utilities and fiber internet connection (1gbit up/1gbit down)

- Demand Response Programs are financial incentive programs that compensate energy users during times of peak demand. Bitcoin mining, node operation can be used by coal, natural gas, renewables and waste energy – to monetize reserve margin
 - Bitcoin miners can quickly curtail energy usage as needed and be willing participants in demand response programs
 - DRPs have historically been used by large real estate portfolio owners and other users of energy

 - Here is a mission statement for Bitcoin Research & Ventures Company LLC, reflecting its unique ownership and focus:

Mission Statement:

Guided by the foundational vision of Satoshi Nakamoto (Brock Angelle Thibodeaux), Bitcoin Research & Ventures Company LLC is dedicated to accelerating the transformative potential of decentralized technologies. We achieve this by strategically investing in the most promising Bitcoin, web3 and web5 startups and projects, pioneering the next generation of ASIC hardware and conducting rigorous research and development to deepen the understanding and enhance the capabilities of the Bitcoin blockchain. Our mission is to foster innovation, drive adoption and uphold the core principles of decentralization and security that underpin the future of the internet and digital finance.

- We have to make sure that ASICs, Nodes, even Bitcoin Core, does not somehow become a or multiple kinds of “financial institution”/“financial institutions”

 - Reciprocal Square Root

^ Approximations that depend on the floating point representation

See also: [binary logarithm](#)

A number is represented in a [floating point](#) format as $m \times b^p$ which is also called [scientific notation](#). Its square root is $\sqrt{m} \times b^{p/2}$ and similar formulae would apply for cube roots and logarithms. On the face of it, this is no improvement in simplicity, but suppose that only an approximation is required: then just $b^{p/2}$ is good to an order of magnitude. Next, recognise that some powers, p , will be odd, thus for $3141.59 = 3.14159 \times 10^3$ rather than deal with fractional powers of the base, multiply the mantissa by the base and subtract one from the power to make it even. The adjusted representation will become the equivalent of 31.4159×10^2 so that the square root will be $\sqrt{31.4159} \times 10^1$.

If the integer part of the adjusted mantissa is taken, there can only be the values 1 to 99, and that could be used as an index into a table of 99 pre-computed square roots to complete the estimate. A computer using base sixteen would require a larger table, but one using base two would require only three entries: the possible bits of the integer part of the adjusted mantissa are 01 (the power being even so there was no shift, remembering that a [normalised](#) floating point number always has a non-zero high-order digit) or if the power was odd, 10 or 11, these being the first two bits of the original mantissa. Thus, $6.25 = 110.01$ in binary, normalised to 1.1001×2^2 an even power so the paired bits of the mantissa are 01, while $.625 = 0.101$ in binary normalises to 1.01×2^{-1} an odd power so the adjustment is to 10.1×2^{-2} and the paired bits are 10. Notice that the low order bit of the power is echoed in the high order bit of the pairwise mantissa. An even power has its low-order bit zero and the adjusted mantissa will start with 0, whereas for an odd power that bit is one and the adjusted mantissa will start with 1. Thus, when the power is halved, it is as if its low order bit is shifted out to become the first bit of the pairwise mantissa.

A table with only three entries could be enlarged by incorporating additional bits of the mantissa. However, with computers, rather than calculate an interpolation into a table, it is often better to find some simpler calculation giving equivalent results. Everything now depends on the exact details of the format of the representation, plus what operations are available to access and manipulate the parts of the number. For example, [Fortran](#) offers an `EXPONENT(x)` function to obtain the power. Effort expended in devising a good initial approximation is to be recouped by thereby avoiding the additional iterations of the refinement process that would have been needed for a poor approximation. Since these are few (one iteration requires a divide, an add, and a halving) the constraint is severe.

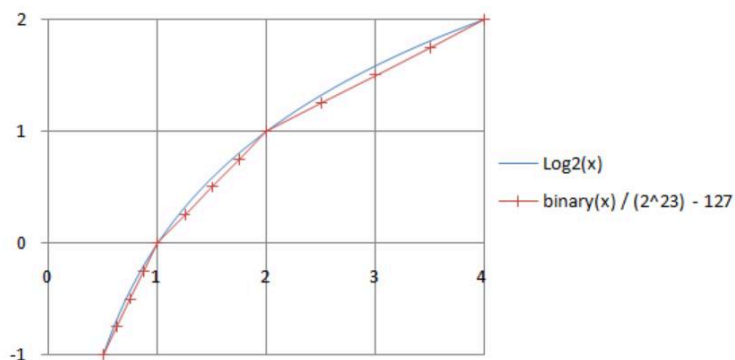

Many computers follow the [IEEE](#) (or sufficiently similar) representation, and a very rapid approximation to the square root can be obtained for starting Newton's method. The technique that follows is based on the fact that the floating point format (in base two) approximates the base-2 logarithm. That is $\log_2(m \times 2^p) = p + \log_2(m)$

So for a 32-bit single precision floating point number in IEEE format (where notably, the power has a [bias](#) of 127 added for the represented form) you can get the approximate logarithm by interpreting its binary representation as a 32-bit integer, scaling it by 2^{-23} , and removing a bias of 127, i.e.

$$x_{\text{int}} \cdot 2^{-23} - 127 \approx \log_2(x).$$

For example, 1.0 is represented by a [hexadecimal](#) number 0x3F800000, which would represent

$1065353216 = 127 \cdot 2^{23}$ if taken as an integer. Using the formula above you get $1065353216 \cdot 2^{-23} - 127 = 0$, as expected from $\log_2(1.0)$. In a similar fashion you get 0.5 from 1.5 (0x3FC00000).

To get the square root, divide the logarithm by 2 and convert the value back. The following program demonstrates the idea. The exponent's lowest bit is intentionally allowed to propagate into the mantissa. One way to justify the steps in this program is to assume b is the exponent bias and n is the number of explicitly stored bits in the mantissa and then show that

$$\left(\left(\frac{1}{2} (x_{\text{int}}/2^n - b)\right) + b\right) \cdot 2^n = \frac{1}{2} (x_{\text{int}} - 2^n) + \left(\frac{1}{2} (b + 1)\right) \cdot 2^n.$$

Fast inverse square root

Article Talk

Fast inverse square root, sometimes referred to as **Fast InvSqrt()** or by the hexadecimal constant **0x5F3759DF**, is an **algorithm** that estimates $\frac{1}{\sqrt{x}}$, the **reciprocal** (or multiplicative inverse) of the **square root** of a 32-bit floating-point number x in **IEEE 754 floating-point format**. The algorithm is best known for its implementation in 1999 in *Quake III Arena*, a **first-person shooter** video game heavily based on **3D graphics**. With subsequent hardware advancements, especially the **x86 SSE** instruction `rsqrtss`, this algorithm is not generally the best choice for modern computers,^[1] though it remains an interesting historical example.^[2]

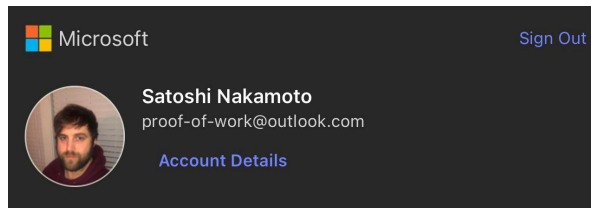

- OpenGL, Legacy PC/Macintosh gfx frameworks/code for:

 - TikTok < Senator Ted Cruz
 - 2600 article/reverse-engineering-hack revival
 - dCEH certification possible training scenario
 - Hack TikTok info-stream, port to blockchain in order to disrupt bad actor(s)
 - What happens to all opreturn data before this new update?
 - Can new opreturn data be used infuture to corrupt web1, web2 data when operating within a web3, web5 environment? Are we dealing with a Trojan horse here?
 - Is new opreturn rule(s) the first chance at HTML5-on-blockchain?
 - w some web3, web5 browser or explorer being able to convert long string(s) of text/hashtext hybrid into HTML5-like visual(s) within said browser environment
 - think '92-era-type browser functioning
 - Terminal but with cross-site Htmlgetrequest-type functioning, ability to use multiple oracles simultaneously and not freakout or crash due to having no way to edit or leave a placemaker on the data it is reading from...or not have some random exploit force it to create a transaction from some rogue web3 or web5 web-wallet or something, with opreturn text whose sole purpose is nefarious and temporary and just takes up space
 - Can the new information included in opreturn fields be used to confuse/slow-down the exploitable potential of Quantum Neural Nets (including Machine/Natural Language ones) to possibly break AES/SHA-XXX
 - Something like adding to the code the ability to include (if necessary) in a new block or coinbase transaction some string of characters satisfactory-enough to begin to....
 - Can Oracles work with the new opreturn rules?
 - Can every transaction after the new OP_RETURN lifting of character limits potentially be a web3, web5 website and or a part of the future decentralized internet...?
